Windows 10

To empty `temp` folder:

1. Windows key + R
2. Type: %temp%

To view startup folder:

1. Windows key + R
2. Type: `shell:startup`

To print directory listing:

1. Hold down shift key as you right-click anywhere in the folder
2. In the contextual menu, select "Open PowerShell window here"
3. Type one of the following:
    1. `dir > printit.txt` — generates a list of all files, their permissions mode, their size, and their last write time
    2. `dir /b > printit.txt` — will print only the file names
    3. `dir /o:d > printit.txt` — will sort by date
    4. `dir *.png /o:d /s > printit.txt` — will list only *png files, sorted by date, and will include those found in the current folder's subfolders
    5. `dir /?` — will give a list of more options

Miscellaneous Tasks:

- How to Speed Up a Windows Folder that Loads Very Slowly
- How to Fix Slow Folders in Windows Explorer
- Fix Windows folder unresponsive/slow behavior, green loading bar
- Create a text file of the contents of a directory in Windows Explorer
